SKILLS SUMMARY

- **Core Data Analytics:** SQL (PostgreSQL, MySQL), Power BI, Tableau, Excel, KPI Analysis, Exploratory Data Analysis (EDA), Data Cleaning, Data Wrangling
- **Programming Data Infrastructure:** Python (Pandas, NumPy, PySpark), R, Snowflake, BigQuery, Databricks, dbt, Azure Data Factory, GCP, AWS, SQLite, SQL Optimization, Git/GitHub Actions, Docker, CI/CD Pipelines, Medallion Architecture
- **Big Data Data Engineering:** ETL/ELT Pipeline Development, Apache Spark, Hadoop, Data Warehousing (Snowflake, Redshift, BigQuery), Data Lakes, Stream Processing (Kafka), Workflow Orchestration (Airflow, Prefect)
- **Statistical Predictive Modeling:** A/B Testing, Hypothesis Testing, Regression Analysis, Time Series Forecasting, Scikit-learn, NLP (BERT), Recommender Systems
- **Professional Skills:** Data Quality Assurance, Performance Optimization, Cross-functional Collaboration, Stakeholder Communication, Agile/Scrum, Documentation and Knowledge Sharing

PROJECTS

Supply Chain Data Pipeline & Behavioral Analytics

- **Built** an end-to-end **data processing pipeline** using **Python** and **SQL** to ingest and analyze a **100K+ e-commerce dataset**, enabling large-scale customer churn analysis.
- **Designed** scalable transformation queries to integrate socio-economic purchasing indicators, generating structured datasets used for downstream behavioral segmentation.
- **Developed** a recommendation workflow using **Neural Collaborative Filtering (NCF)** to support personalized marketing pipelines, improving cross-sell performance by **22%** and reducing churn by **4%**.

Revenue Analytics Data Pipeline

- **Engineered** a cloud-based analytics pipeline by ingesting **Stripe API** transaction data into **BigQuery**, enabling scalable processing of customer payment and revenue datasets.
- **Developed** optimized **SQL transformation models** to perform cohort analysis, frequency modeling, and revenue trend analysis for high-volume transactional data.
- **Implemented** modular transformation workflows using **dbt** while enforcing **ISO 8000 data quality standards**, and automated deployments through **GitHub Actions CI/CD pipelines**.

WildForest: Geospatial Data Engineering Pipeline

- **Constructed** a scalable geospatial **ETL pipeline** processing **500K+ NASA VIIRS satellite records** using **Python**, **GeoPandas**, and **PostgreSQL**.
- **Designed** feature engineering workflows generating **15+ environmental indicators** (NDVI, TI5, moisture indices) to standardize noisy multi-sensor satellite data.
- **Transformed** raw satellite telemetry into structured datasets enabling efficient downstream wildfire risk modeling and spatiotemporal analytics.

SASRec: Large-Scale Recommendation Pipeline

- **Developed** a scalable recommendation system pipeline using **PyTorch Transformers** to process **1M+ user interaction records** and model sequential purchasing behavior.
- **Optimized** training throughput using negative sampling and mini-batching strategies for embedding generation, reducing inference latency by **40%**.

EXPERIENCE

Fullstack Developer (Freelance)

Hybrid

- Led client discovery sessions to define KPIs and translate ambiguous requirements into structured analytical solutions.
- Built data-driven solutions using EDA, schema optimization, and geospatial (Haversine) and optimization (Knapsack) models to improve operational efficiency.

Executive Lead — AI Fanshawe Club

In-person

- Mentored 25+ teams building data-driven MVPs, emphasizing problem framing, data quality, and execution discipline.
- Aligned business and engineering teams by simplifying complex AI concepts into actionable project strategies.

HONORS & VOLUNTEER EXPERIENCE

1st Rank — Hackathon , 2nd Rank — Province Wide Computer Olympiad , Computer Science Tutor — Fanshawe College

EDUCATION

Fanshawe College

London, Canada

Computer Science

Sept 2023 – Dec 2026

- **Relevant Coursework:** Operating Systems, Database Management (SQL), Data Structures & Algorithms, Artificial Intelligence, Machine Learning, Statistics
